Profile Summary

Analytical IT student specializing in Web Development with a passion for Search Engine Optimization. Utilizing knowledge of HTML/CSS with basic fundamentals in SEMRush and Google Analytics to improve site visibility and performance.

Academic Projects

DoMore – Web-based Planner System

- A web-based planner system combining task and file management, currently deployed via localhost. Acted as a core member in a group development setting. Developed the application using Node.js & Express.js with a MongoDB backend for data storage, and designed the UI/UX using Figma for the mock-up and CSS for modern, responsive presentation in the program itself.

Cafe Crawl – Cafe Blogging Website

- Initially developed as an individual project, it has been scaled to become like a content management system via localhost, designed for users to post, read, and rate local coffee shops. Utilized PHP and MySQL for robust backend logic and data querying, and implemented basic JavaScript for interactive front-end elements.

M&J Quality Used Cars – Business Website & Blog

- Developed a responsive car dealership website using Angular, HTML, and CSS. Implemented a blog section to practice on-page SEO, keyword placement, and content optimization. Prepared for deployment on Hostinger for live testing.
